

## European Initiative to Enable Validation for Highly Automated Safe and Secure Systems

ENABLE-3 is an industry-driven EU-project with 71 partners in 16 countries that aims to enhance today's cost-intensive validation and verification efforts for highly automated and autonomous systems by more efficient and efficient methods. The project's aim is to develop novel testing methodologies and toolchains that will be applicable across 6 industrial domains (Automotive, Aerospace, Rail, Maritime, Health, Farming).

- 71 Partners
- 16 Countries
- Consortium combining experts from six different domains with academia
- € 68M Project Budget
- € 32M Total Funding
